

Risk Management

An introduction to hazard, risk, safety & sustainability management

There is awareness among businesses and those who govern that we should get better at being prepared for the unthinkable.

Think about commercial failures, health and safety at work and play, environmental impacts and sustainability. How do we go about identifying the hazards and how do we work out how to be prepared for the risks?

“An introduction to hazard, risk, safety & sustainability management” may be just the thing to get you and your organisation underway with some tried and tested methods and approaches. This course will not only give the background, it will give some tools.

Participants will be provided with a full set of course notes.

Presenter

➔ *Confirmation of our extensively experienced and highly regarded Presenter will be posted by mid February.*
